

# ARSENIC SYMPOSIUM

33

As

Arsenic  
74.922

OCTOBER 11, 2018

8 a.m. to 4:30 p.m.

SATELLITE STUDENT UNION AT FRESNO STATE

Brought to you by Fresno State's California Water Institute

For more information, visit [www.californiawater.org](http://www.californiawater.org)

## Should you be worried about arsenic in your drinking water?

Arsenic is a naturally occurring element that ranks 20th in abundance among elements in the Earth's crust. The weathering of rocks and minerals is the primary source of naturally-occurring arsenic found in soils and drinking water across the globe, including the San Joaquin Valley.

Attend this free public event to learn more about the sources and causes of arsenic in San Joaquin Valley groundwater; the public health effects of arsenic exposure; the current status of arsenic compliance for drinking water systems; and the latest research related to arsenic in drinking water in the San Joaquin Valley.

## Who attendees will learn from:

- Fresno State Faculty
- Local Hydrogeologists and Well Drillers
- The United States Geological Survey
- State Water Resources Control Board
- Stanford University Researchers

Event attendees will be able to participate in breakout sessions to provide on the next steps to address arsenic in San Joaquin Valley groundwater.

## Who should attend this event?

- Higher education professionals involved in water sustainability
- Residents served by private and public water systems
- Owners and operators of public water systems
- County, state and federal public health and safety representatives
- Non-government organizations representing people, the environment, and agriculture
- Fresno State students, staff, administrators and faculty

FRESNO STATE

Discovery. Diversity. Distinction.
